Heating/Cooling+DHW Heat Pump

Cooling | Heating | Sanitary Hot Water

# Key Components

## RS485 Centralized Control

Green Therm Series is highlighted with central control system as a RS485 serial port is designed for communications in every unit.

## Circulation Water Pump

Connect to the water inlet of the machine to make water flow in the pipe.

## Plate Heat Exchanger

Thin rectangular channels are formed between various plates, and heat exchange is carried out through the plates, which has the advantage of high heat exchange efficiency.

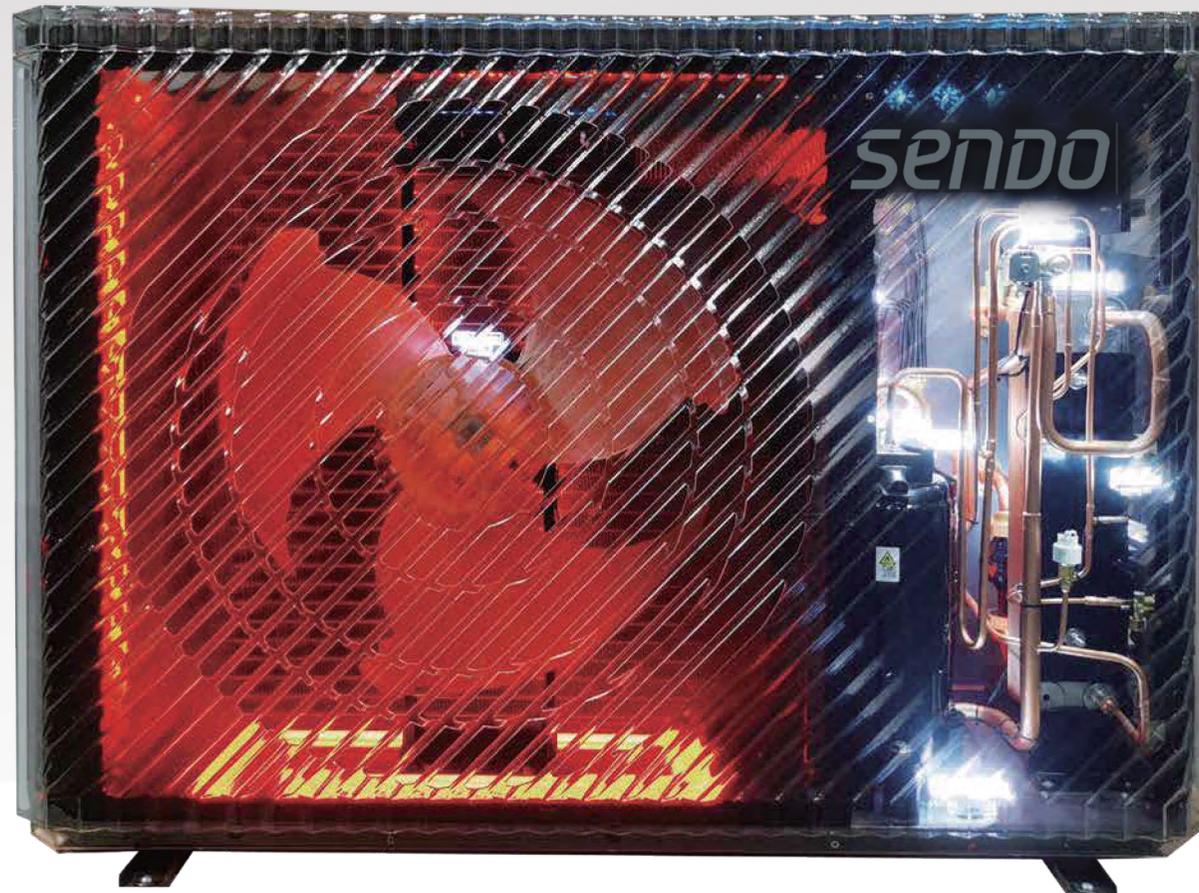

## Electronic Expansion Valve

With electronic expansion valve, it can instantly adjust refrigerant flow to ensure the stability of the refrigeration system.

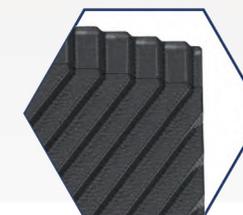

## Elegant Wave Screw-Free Design

GreenTherm Series features stylish and innovative cabinet design, no screws are visible on the surface

## Pressure Sensor

Pressure Sensor can detect system pressure and transmit the signal to the main board so as to protect the unit.

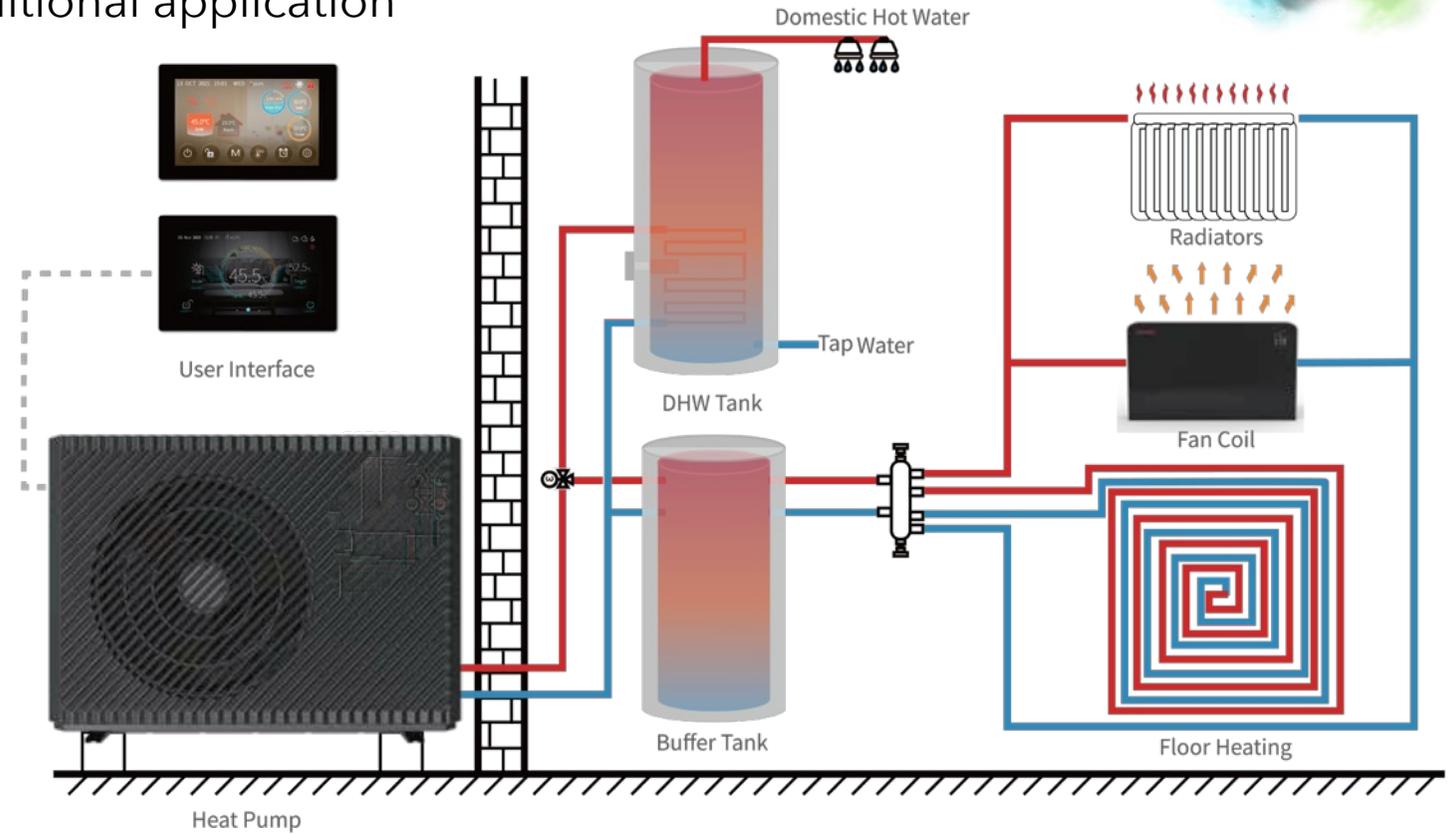

## ASA Material

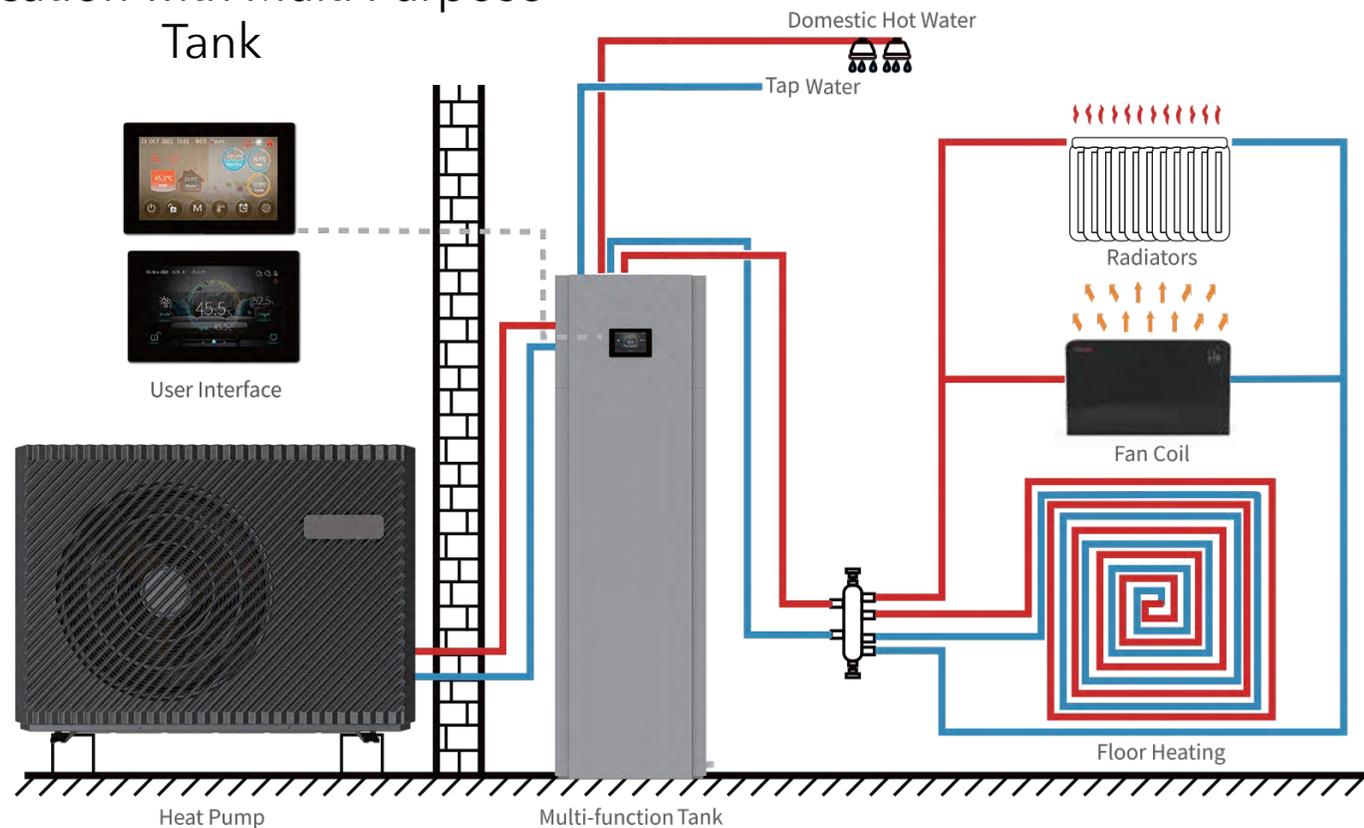

The ASA panel and top cover are strongly corrosion-resistant and anti-weathering that ensures a long service life.

SENDO provides the monoblock heat pump with main circulation pump built inside. When installing the unit, installer should connect the heat pump with other parts including the buffer tank (for space heating/cooling), storage water tank (for domestic hot water) and water pumps (for space heating/cooling water circulation and domestic hot water). External fittings are also needed including the safety valve, water refill valve and hot water valves (three-way valve). Temperature sensor should be added in the storage water tank. Additional electric heater can be installed in the DHW tank or the buffer tank which can get the control signal from the heat pump.

## Traditional application

## Application with Multi Purpose Tank

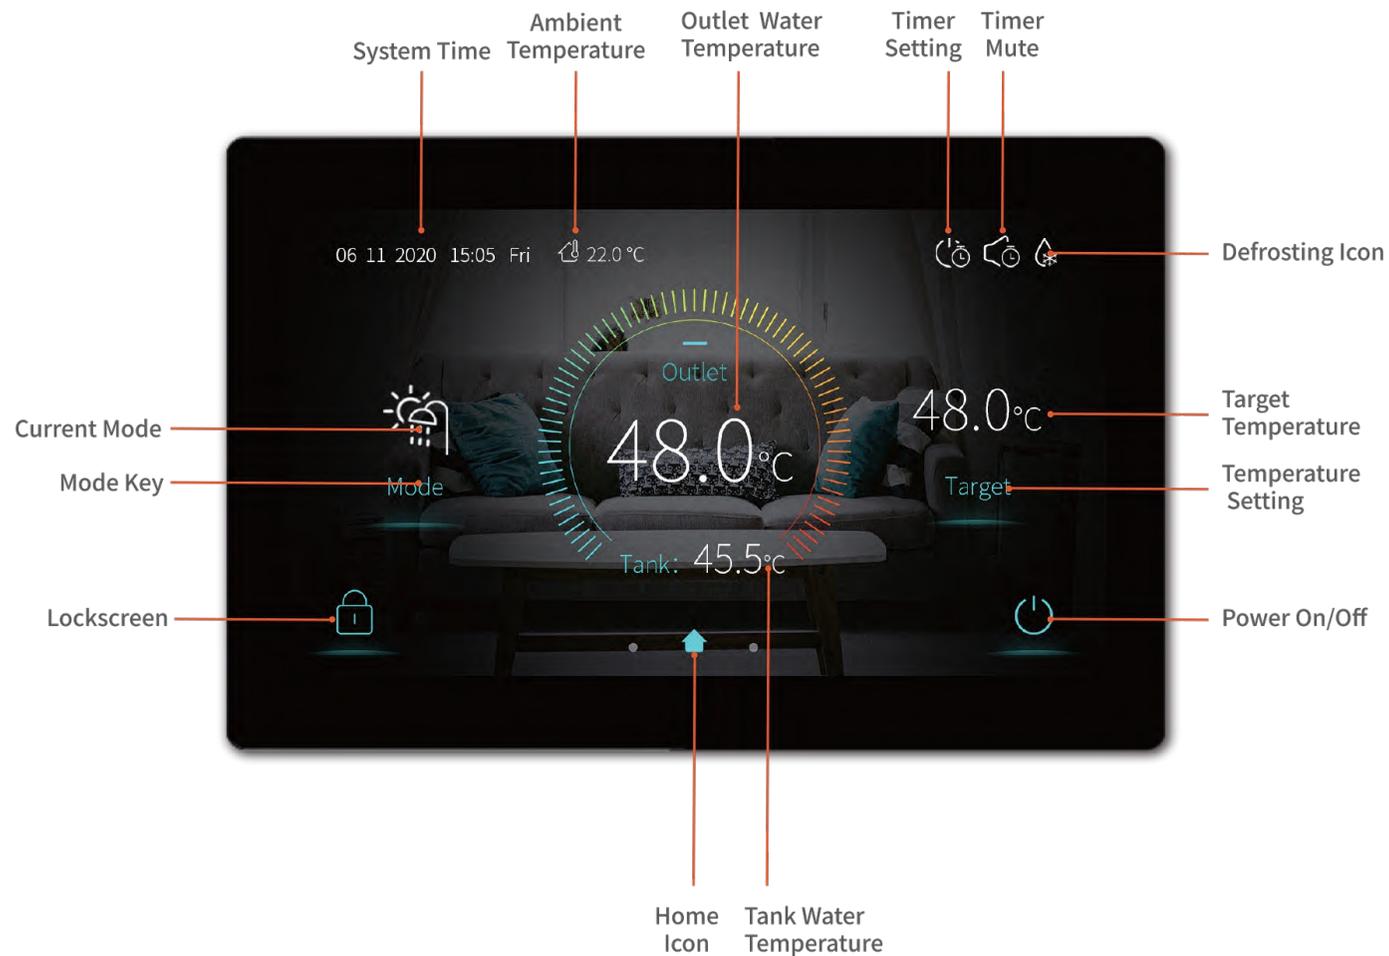

SENDO provides the monoblock heat pump and the Multi-function tank. Multi-function tank includes a buffer tank and a storage tank, a circulation pump for heating/cooling(optional), safety valve, water refill valve and expansion tank. When installing the unit, installer just needs to connect the heat pump directly to the Multi-function tank.

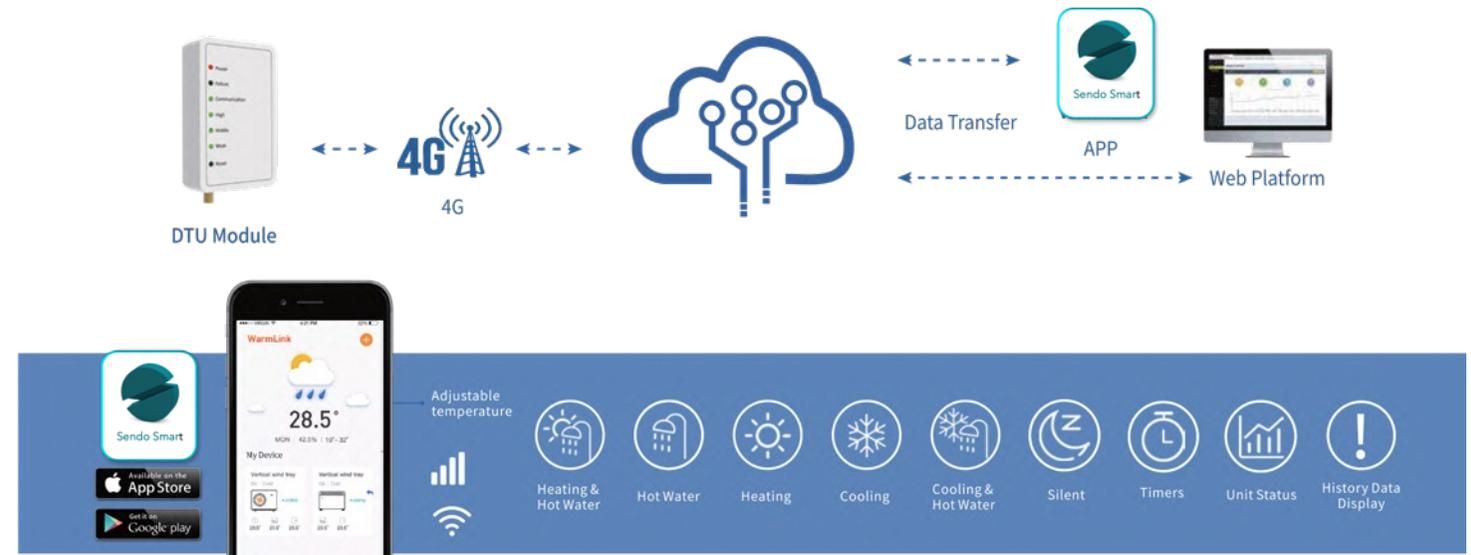

# Smart Touch Display

Two types of controllers are up to choice.

Sendo Smart Display Inverter Heat Pump has a high-end controller with 5-inch colourful touch screen, which is one of the highlights of this steady heat Pump product. With Temperatures and power consumption curve, users can always be clear of the energy consumption at a glance. It is incredibly convenient for users from different countries that multi-language function can be chosen.

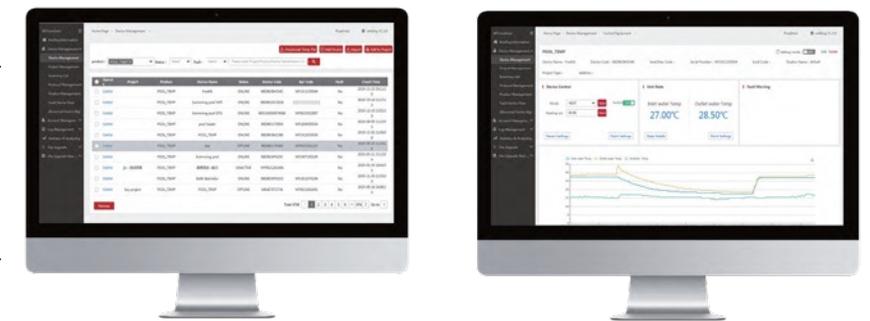

Smart app control brings a lot convenience to users. Temperature adjustments, mode switching, and timer setting can be achieved on your smart phone. Moreover you can know power consumption statistics and fault record anytime and anywhere.

## Web Platform

Central Platform management can be realized with DTU or WIFI function, which effectively saves the cost for labor when service is needed. The fault report button creates a direct error report channel to the local service provider. When an error is reported, the service provider can notice the error information of the target house heating heat pump from the background system, and contact the users immediately to offer help.

# specifications

EVI DC Inverter Heat Pump for cooling heating and DHW (R32)						
Model	SNH-030-HX2P	SNH-040-HX2P	SND-050-HX2P	SNH-040-HX2P	SNH-050-HX2P	SNH-060-HR2P
<b>Heating Condition - Ambient Temp. (DB/WB) : 7/6°C, Water Temp. (In/Out) : 30/35°C</b>
